

ABSTRACT OF THE DISCLOSURE

To produce such effects of a multi-element mineral as control of static electricity and negative ion generation from, amongst the constituent elements of a hairbrush, not only the bristles, but also the bristle mount, so as to provide a hairbrush wherein these effects are increased. In a hairbrush wherein a bristle mount is fitted at the end of a handle, and a plurality of bristles are mounted in this bristle mount, the bristle mount and the bristles comprise a multi-element mineral powder formed by crushing a multi-element mineral.
